Duration: 1 year (2019)

Goal and Scope of Work

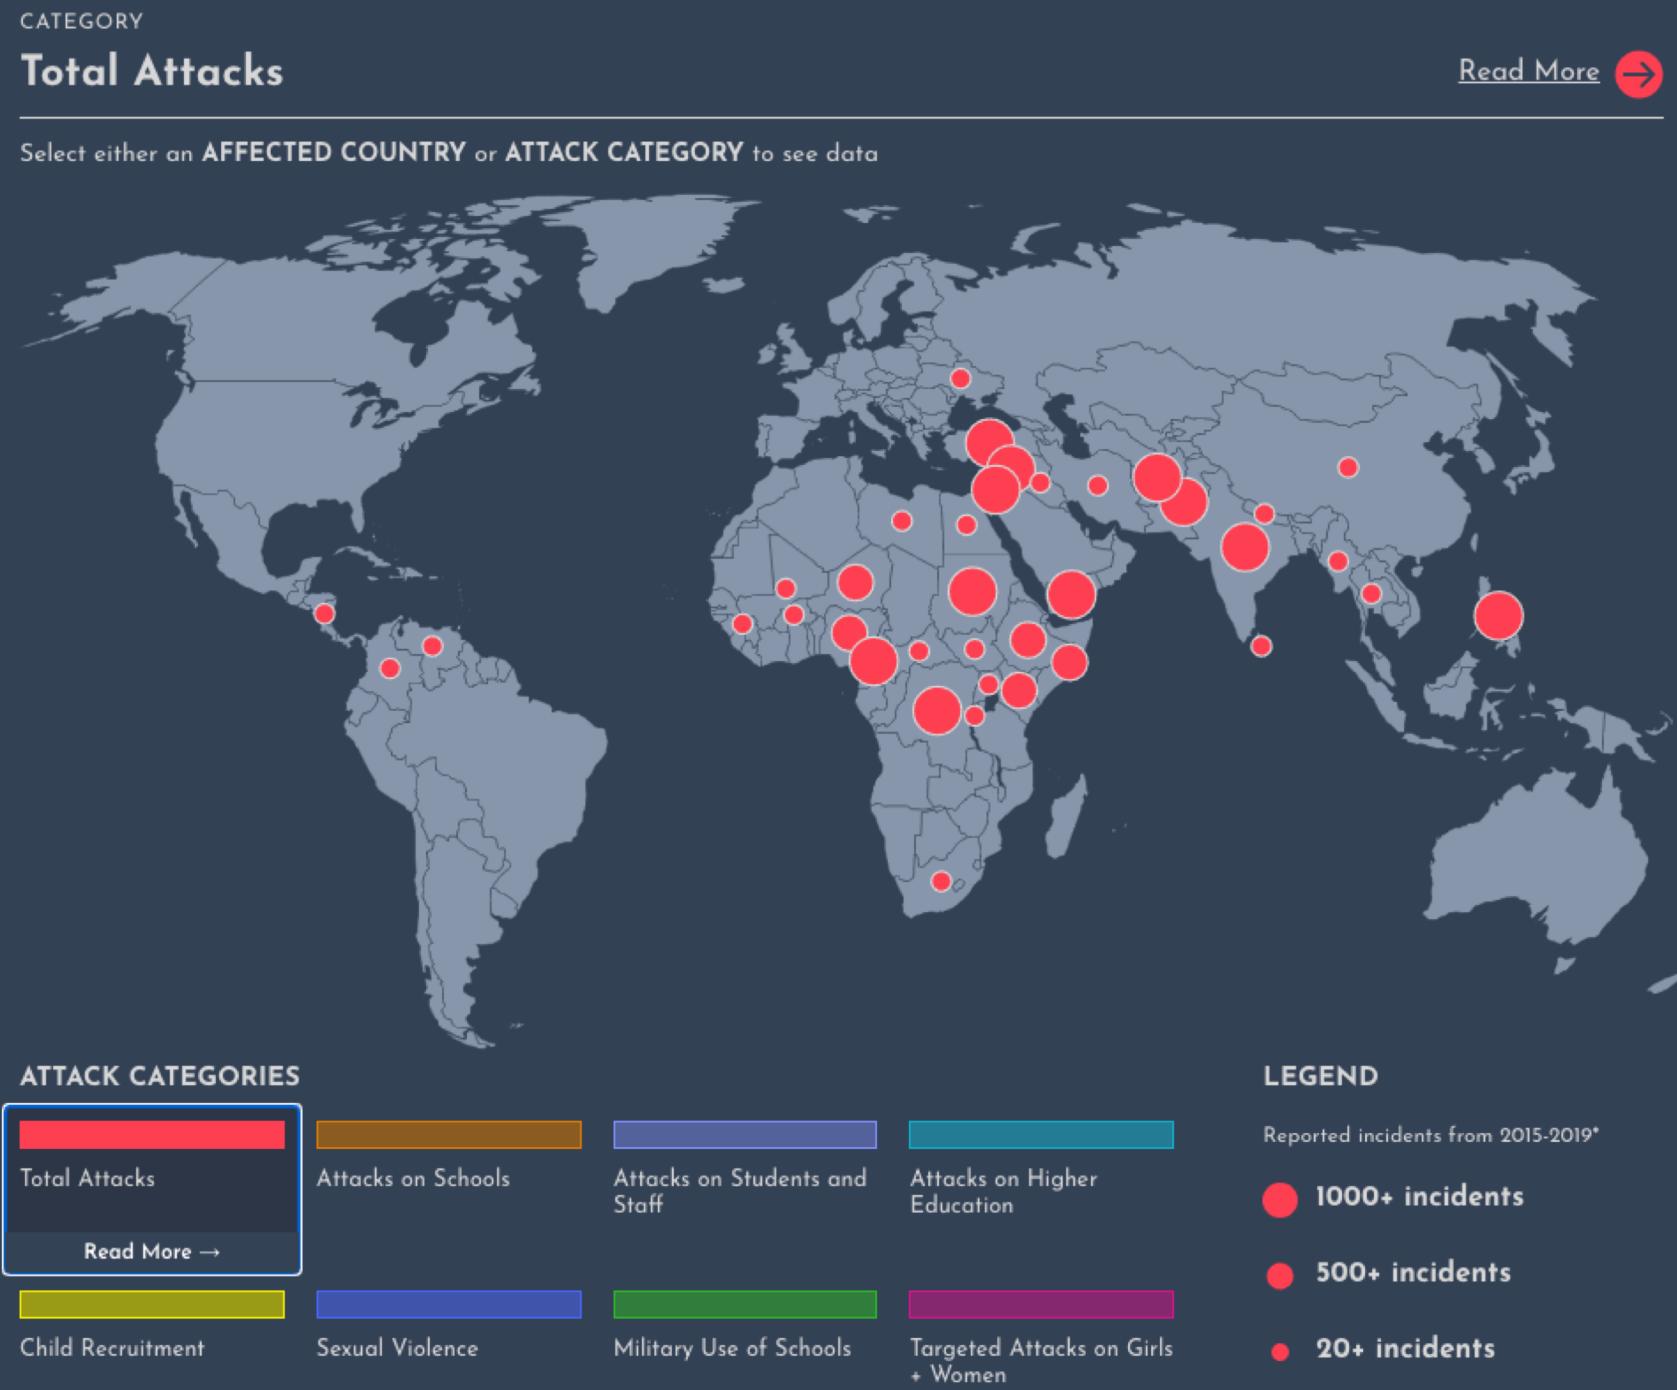

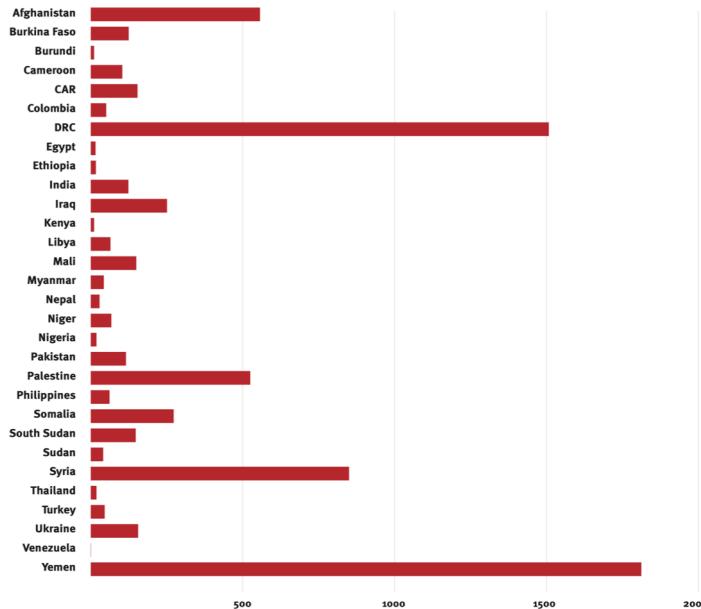

- **Goal:** To collect and make available timely and accurate data about education insecurity from social media sources.
- **Focus:** More focus on “attacks on education”
- According to “Global Coalition to Protect Education from Attack (GCPEA)”, the definition of **“attacks on education”** is:

“Any threat or actual use of force against students, teachers, academics, education support and transport staff (e.g., janitors, bus drivers), or education officials, as well as attacks on education buildings, resources, material, or facilities (including school buses).”

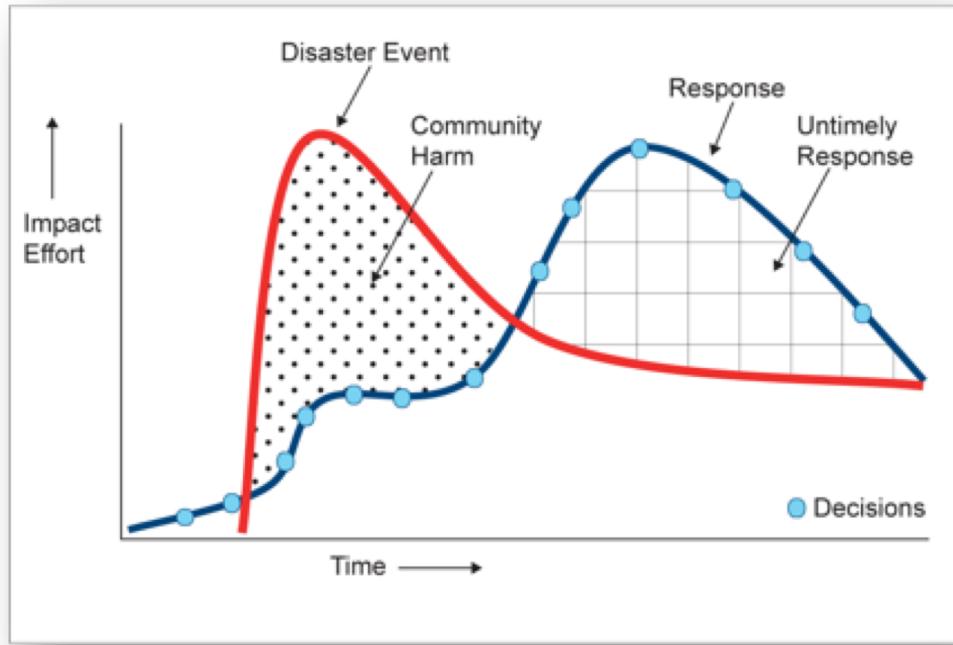

Attacks on Education (2015-2019)

By: GCPEA

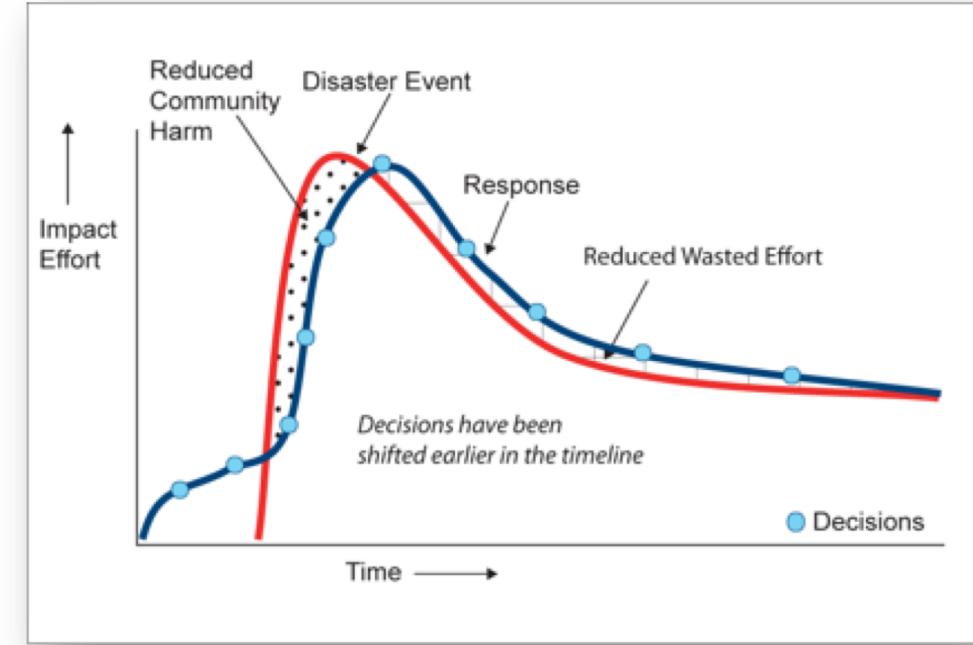

More than **11,000** reported attacks
22,000 students harmed
In **93** countries

Information Gaps and Recency Issues

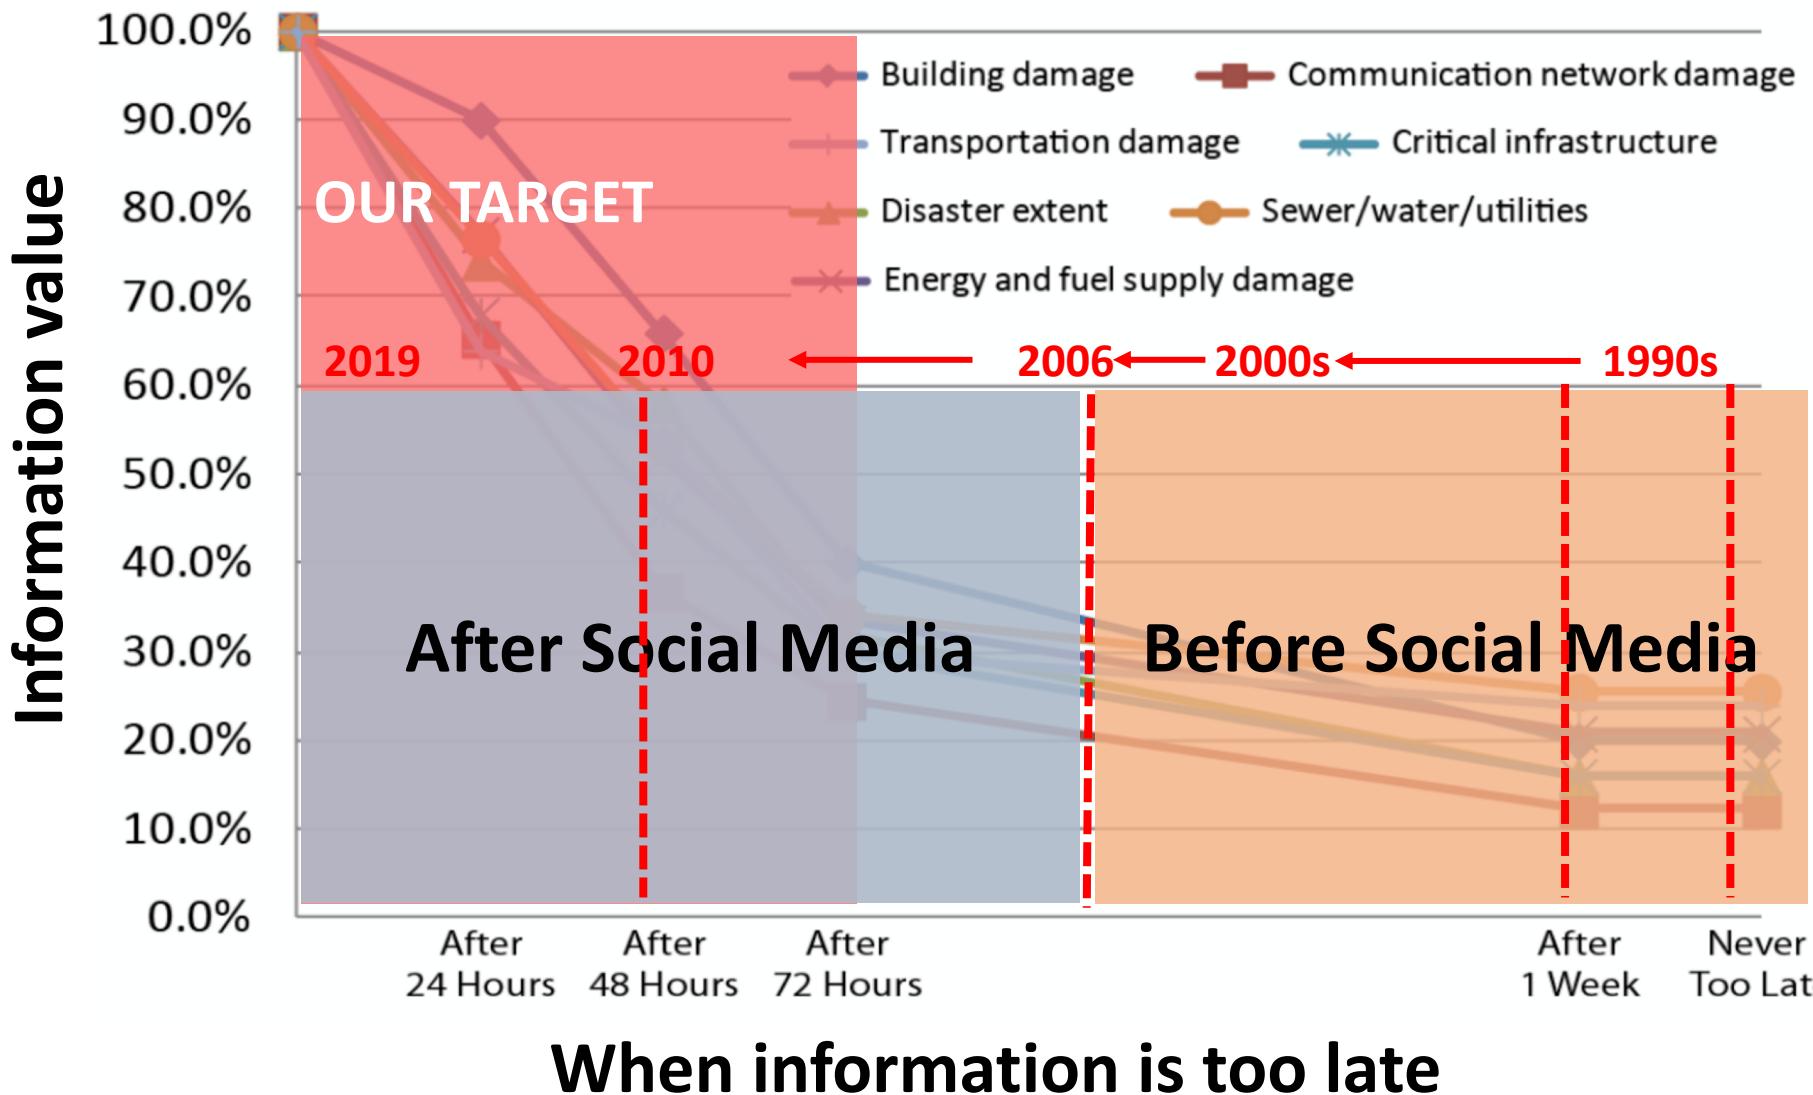

- Delayed access to data
- Delayed decision-making
- Delayed actions
- High community harm

- Timely access to data
- Timely decision-making
- Rapid actions
- Low community harm

The Value of Timely Information

Each passing minute and hour reduce information value

Attacks on Education Reports on Twitter

Taha Bali
@tahabitob

Today Russia and Assad bombed EIGHT schools in Idlib and its countryside.

Education insecurity reports:

- Killing, murder, assassination
- Injured, wounded
- Abduction, kidnapping, detention, imprisoned
- Rape, sexual violence or harassment
- Threats, extorted, abused
- Forced labor
- School/college/university damage

Social Media Data Analysis Challenges (4Vs)

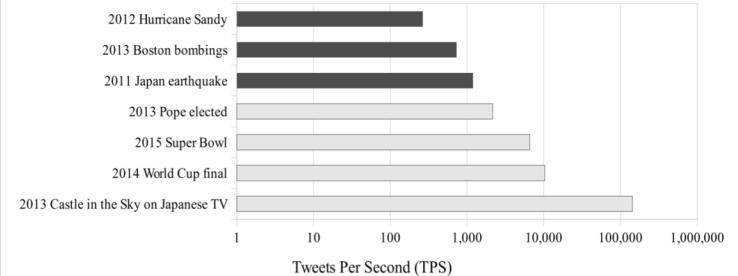

Data volume
increases rapidly

Unknown variety

High data rate

Uncertainty, fake
news, misinformation

Processing Big Data Using AI

Goal: To find relevant and actionable information in near real-time.

Human Intelligence + Machine Learning

Growing stack of data

Apply crowdsourcing

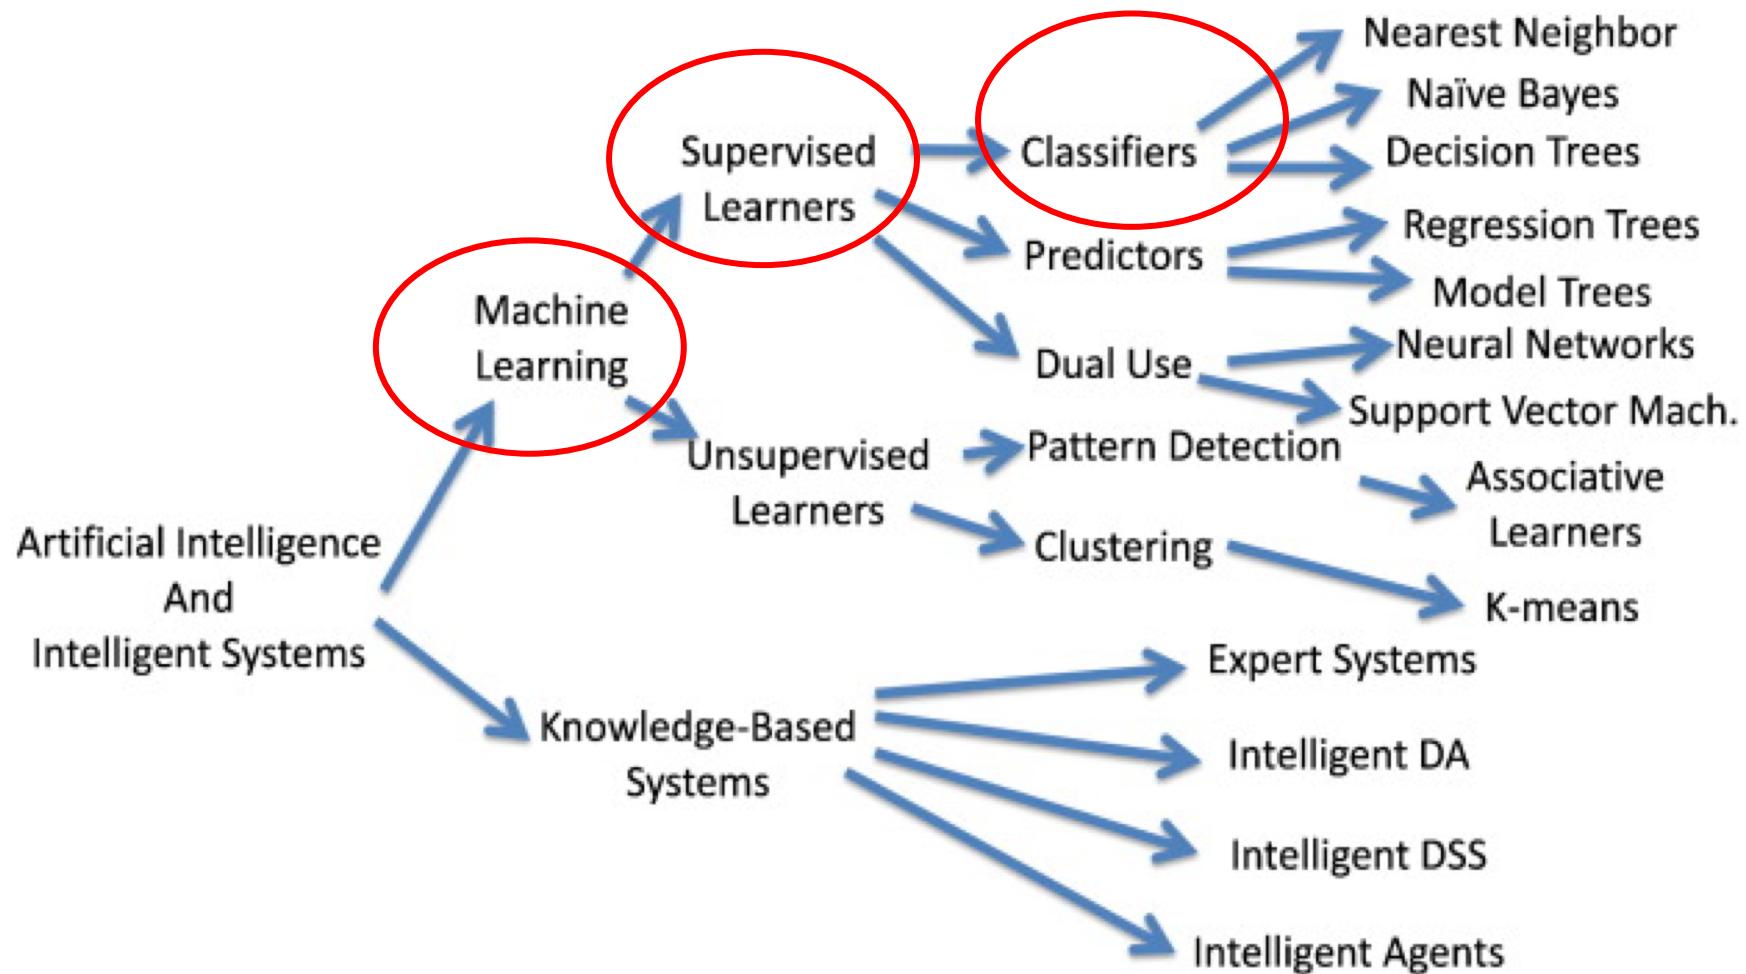

Filter-failure

Apply machine learning

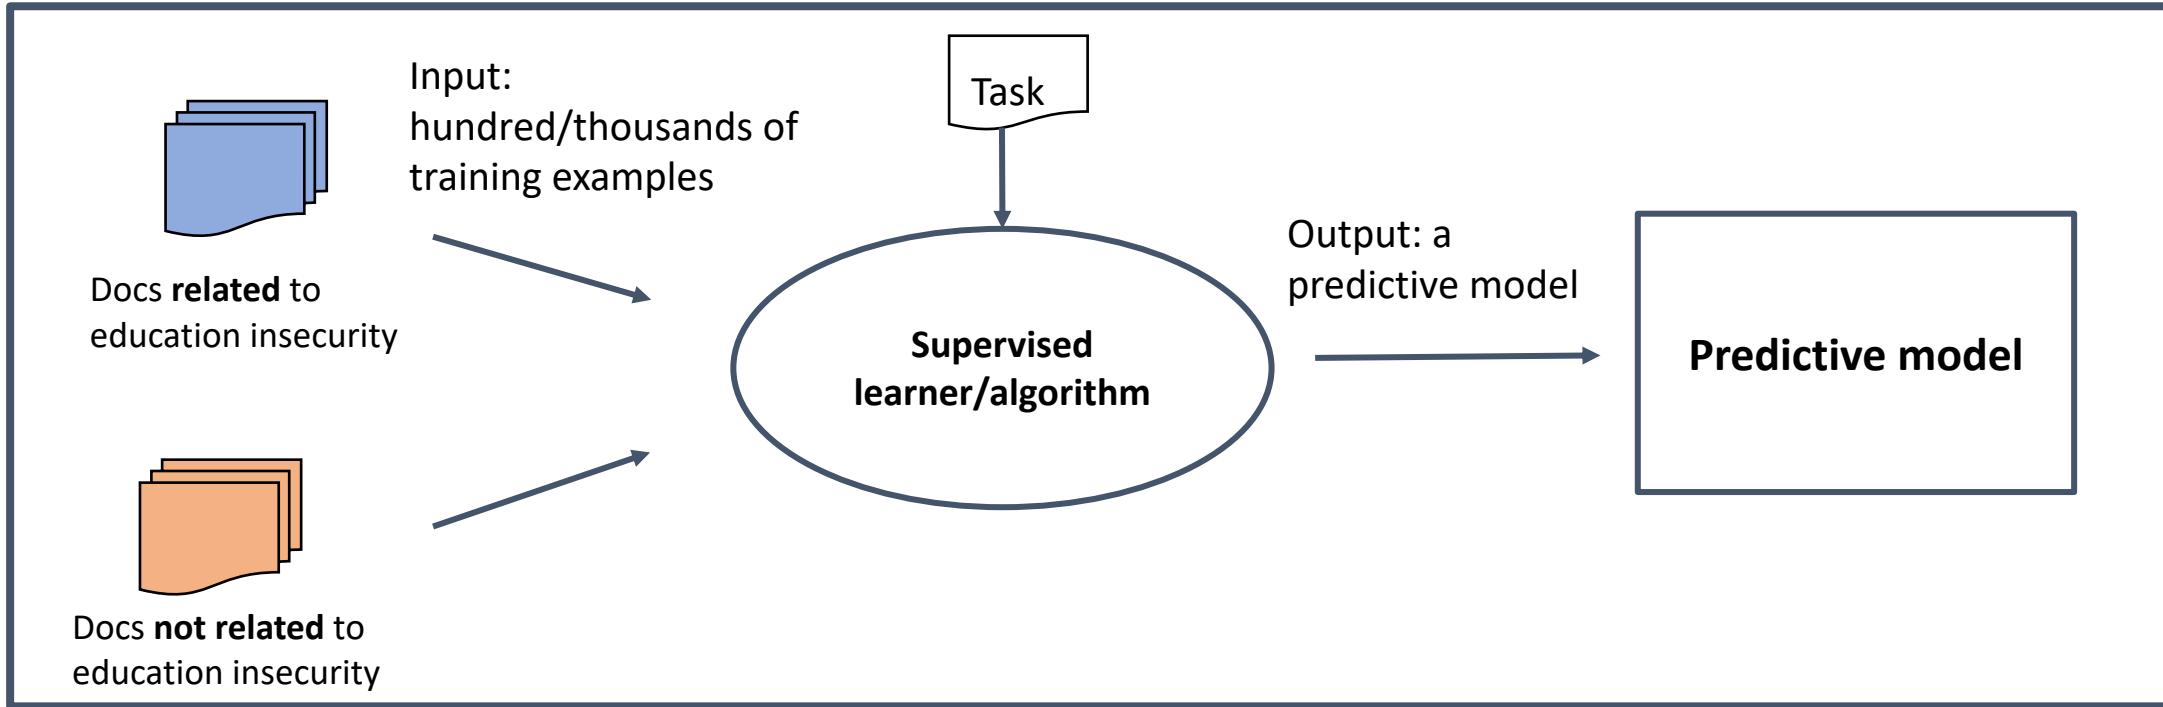

Need human-labeled examples

Artificial Intelligence & Supervised Learning

Supervised Machine Learning

TRAINING

TESTING

Artificial Intelligence for Digital Response

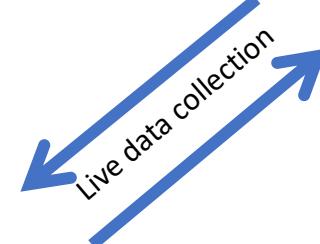

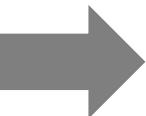

Disaster event (earthquake, flood)

AIDR deployment

AIDR uses machine learning techniques to process social media messages and images

Critical information

- Urgent needs
- Damage assessment
- Other useful info

Relief operations

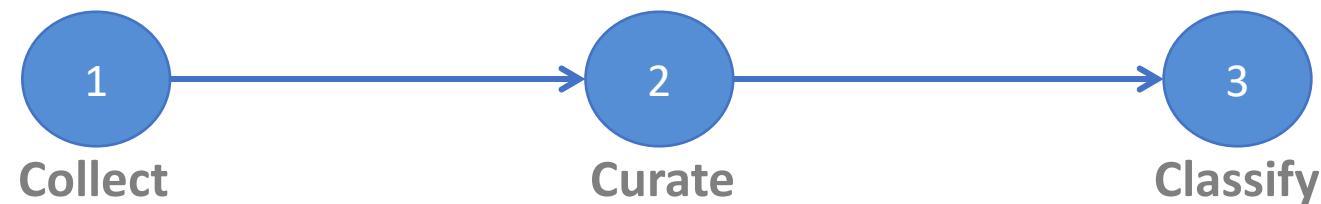

Humanitarian organizations and local administration

Data Collection Strategy (Attacks on Education)

Target languages: Arabic, French, and English

Supervised Learning (Machine Learning Models)

<https://data.humdata.org/visualization/mapping-education-insecurity/>

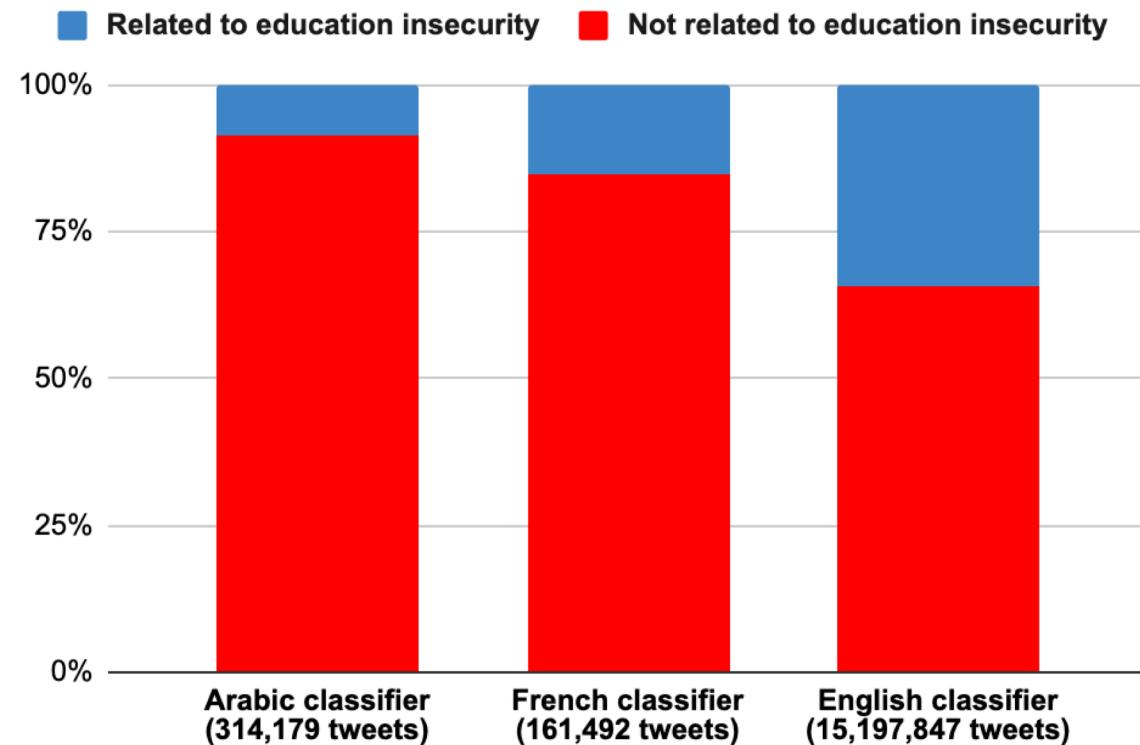

AIDR Processed Data (last updated Aug 2020)

Tweets collection and processed

- English: 15,197,847
- French: 161,492
- Arabic: 314, 179

According to the system, only
8% of the Arabic, 15% of the French, and 34% of the English data is relevant.

Education insecurity data processed by AIDR

Some Reports (Positive and Negative)

Tweet: *"Knife attack at middle school leaves several kids dead..."*

Tweet: *"Mass attack on Conservative Students at High School. The Media doesn't cover it or covers up the fact this was a political attack..."*

Tweet: *"The man is reported to have carried a newly sharpened axe and a knife in a sack and waited the lady at the gate where he attacked her and tried to escape..."*

Tweet: Lorry driver was watching TV on his phone when he killed student, 21, in crash

Tweet: Cousin of USC student killed: The sadness will 'never end'

Mapping Education Insecurity

This visual shows reports of attacks on education in Africa and the Middle East from the Armed Conflict Location & Event Data Project (ACLED) as well as social media posts from Twitter about education insecurity identified by the Artificial Intelligence for Digital Response (AIDR) platform. The blue circles represent the number of tweets about attacks on education; the orange triangles represent verified reports of attacks on education from ACLED.

The OCHA Centre for Humanitarian Data created this visual in partnership with the Education Above All Foundation and the Qatar Computing Research Institute to increase access to timely data about education insecurity.

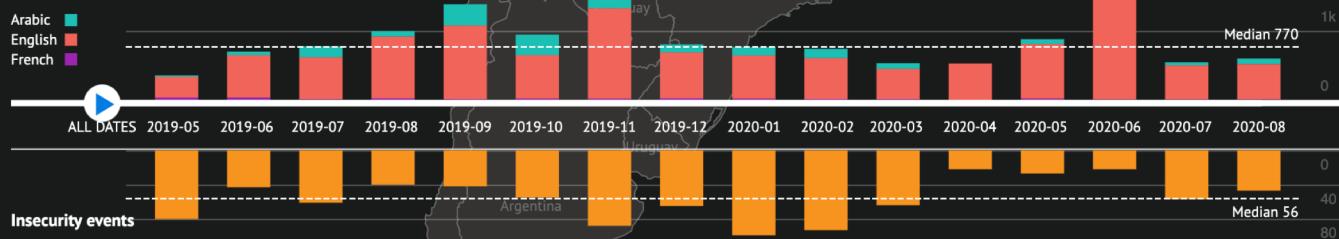

Note: due to a technical issue, Twitter data was collected only in English during April 2020.
